

Root-to-tip regression – Dataset B – SIMULATED (60 seq, 2005–2025)

best-fit root | $R^2 = 0.806$ | slope = $2.43\text{e-}03$ subs/site/yr | x-intercept (tMRCA) = 1994.3

Excellent – strong molecular clock; proceed confidently

● within expectation ● outlier ($|z|>2$)
